EDUCATION

ENSI - National School of Computer Science, Manouba, Tunisia 2024 - 2027
Engineering Student in Computer Science

FSM - Faculty of Sciences of Monastir, Monastir, Tunisia 2022 - 2024
Preparatory Studies in Mathematics and Physics – Ranked 350th out of 1,700 in the National Engineering Exam

EXPERIENCE

Summer Intern – Artificial Intelligence Jul 2026 – Aug 2026
Hutchinson *Sousse, Tunisia*

- Engineered a cross-platform, real-time production monitoring system powered by a machine learning model for automated anomaly detection on live industrial data streams

Summer Intern – Artificial Intelligence Aug 2025
SWConsulting *Monastir, Tunisia*

- Loan Application Prediction: Built an end-to-end loan approval prediction pipeline using scikit-learn, benchmarking 5+ machine learning models before selecting TabPFN for a 92% prediction accuracy.
- Deployed the solution with Streamlit for interactive real-time inference.

Media Manager – Code & Conquer 2.0 Jan 2025 – Jun 2025
ENSI Competitive Programming Club (ECPC) *Manouba, Tunisia*

- Led media and visual communication for ENSI's largest competitive programming event, engaging **150+ participants**, and contributed to its visual identity, promotional strategy, and content management.

TECHNICAL SKILLS

Machine Learning	Deep Learning, Computer Vision, CNN, YOLO, RAG
LLM & Generative AI	LangGraph, Prompt Engineering, Vector Databases
Programming	Python, C++, JavaScript
ML Frameworks	PyTorch, TensorFlow, Scikit-Learn, OpenCV
Data & Analysis	NumPy, Pandas, Matplotlib, Seaborn, Data Preprocessing
Web Development	React, Flutter, HTML, CSS, Vite, Tauri, Node.js, Hono, Bun, REST APIs, FastAPI
Deployment & MLOps	Docker, CI/CD, Git, GitHub, GitLab, Streamlit
Databases	MongoDB, SQL
Languages	Arabic (Native), English (B2), French (B2), German (A1)
Personal Skills	Leadership, Teamwork, Public Speaking

PROJECTS

CropEye – Autonomous Agricultural Drone: Built an autonomous drone that detects olive tree Verticillium wilt in real time using an onboard **YOLOv8n** model, optimized via ONNX **INT8** quantization for edge inference on a Raspberry Pi 4. Integrated an MCP-based agentic control layer enabling natural-language flight-mission planning and autonomous execution via MAVLink/ArduPilot, without manual piloting.

Plant Disease Classifier – Edge-Optimized Computer Vision: Delivered **94.35%** Top-1 accuracy by training and fine-tuning a MobileNetV2 classifier on the PlantVillage dataset, then compressed it with TensorFlow Lite **INT8** quantization for edge deployment, limiting the accuracy drop to **1.6%** while significantly reducing model size.

PlateVision – License Plate Recognition System: Reached **90%+** recognition accuracy by engineering an AI-powered license plate recognition pipeline (YOLO-based detection + EasyOCR), with automatic validation logic and real-time vehicle tracking for continuous unattended monitoring.
